where each data element corresponds to any entry in one of a plurality of buffer pages, *each buffer page having a plurality of entries along a first dimension corresponding to the first order and a plurality of entries along a second dimension corresponding to the second order,*

and where data is stored to memory devices in the first order and retrieved from memory devices in the second order, and where each memory page stores data in multiple locations according to the first order and stores data in multiple locations according to the second order.

Art Unit: 2628

where at least two data elements that *consecutive in the first order are stored in parallel* to the memory devices, and where at least two data elements that are *consecutive in the second order are retrieved in parallel* from the memory devices.

The closest prior art, Okuno (U.S. Patent No. 6,105,114) teaches a 2D array of transposition circuit for reading a 2D array in an order different from that for writing.

However, reference Okuno in combination with admitted prior art fails to teach the above-mentioned features.
